

UK fellas take 8m love sickies

18 November 2006

BRITISH men are the most lovesick in Europe -missing EIGHT MILLION work days a year with symptoms, research has revealed.

A huge 63 per cent -well above the 56 per cent Euro average -have suffered dizziness, stomach upsets or heart palpitations. And 24 per cent said they had rung in ill with symptoms.

But UK men like to keep their love lives secret -with only one per cent choosing to chat about their new loves as much as possible.

The research by dating agency PARSHIP also revealed one in three Brit men had fallen in love on a first date -and 47 per cent by the third. But seven out of ten UK lasses needed at least five dates to be sure.
